

# Lists

The following sections contain lists where the first child of each item is a block-level element, using blank lines following [Kramdown syntax](#).

For some combinations (especially those involving description list elements) vertical alignment in the rendered web pages is not ideal in v0.3.1.

The following setting in `_config.yml` loads the custom CSS in `fix-lists.scss`, which fixes most of the alignment issues:

```
color_scheme: fix-lists
```

## Unordered lists
